Summary

Entry-level Network Engineer with hands-on experience in routing, switching, network monitoring, and troubleshooting in enterprise environments. Familiar with Cisco routers, switches, VLAN configuration, Access Control Lists, and ISP coordination. CCNA-level knowledge with strong fundamentals in TCP/IP, subnetting, routing protocols, and firewall concepts.

Education

R V College of Engineering, Bengaluru MTech in Computer Network Engineering - 8.1/10	2023 - 2025
BMS Institute of Technology and Management, Bengaluru B.E in Computer Science and Engineering - 6.62/10	2019 - 2023

Internships

SQA Technologies Pvt Ltd - Software Engineering Intern - Monitored system performance and application connectivity in an enterprise environment - Participated in troubleshooting network-related issues affecting applications - Worked with REST services and logs to identify connectivity failures and latency - Collaborated with engineers to validate deployments across environments	Oct 2024 - April 2025
Varcons Technologies Pvt Ltd - Software Development Intern - Performed functional testing of web systems across different network conditions - Identified connectivity, DNS, and browser-based access issues during testing - Documented issues, logs, and resolutions aligned to enterprise support workflow	Aug 2022 - Sept 2022

Projects

Automated Signature Authentication Using Deep Convolutional Neural Network: - Built a deep learning model using MobileNetV2 for distinguishing real and forged signatures - Preprocessed and augmented datasets to improve model performance, executed test cases for model accuracy, precision. - Developed scripts for automated evaluation and reporting of results - Documented insights and improvement strategies based on test outcomes	May 2025 - Oct 2025
Action Detection in Classroom Environment: - Built backend services using FastAPI exposing REST APIs for real-time event detection - Processed streaming data using Python, OpenCV, and microservice-style components - Enabled scalable, event-driven processing suitable for cloud/Kubernetes environments	Jan 2025 - April 2025
Delay-Tolerant Routing Protocol Simulation (NS-3): - Collected and analyzed structured simulation datasets across multiple network scenarios. - Performed metric-based analysis (latency, delivery ratio, overhead) using scripting and statistical methods. - Documented reproducible results and released findings in a peer-reviewed journal.	Oct 2024 - Dec 2024
Bandwidth Usage Monitoring: Built a tool to track network bandwidth usage across devices. Detected high-usage patterns, peak time spikes, and generated alerts. Analyzed logs to troubleshoot abnormal consumption and connectivity issues	Aug 2024 - Sept 2024

Technical Skills

Cisco Networking: Routers, Switches, Firewalls
Routing & Switching: VLANs, Trunking, ACLs, OSPF, EIGRP (basic)
Network Protocols: TCP/IP, DNS, DHCP, NAT, SNMP
Tools: Wireshark, SolarWinds, PRTG
Configuration: Cisco IOS basics, Router configuration, IP addressing
Troubleshooting: Link failures, packet loss, latency issues
ISP Coordination: Circuit issues, outage handling, escalation
Enterprise Networking Concepts: WAN/LAN, VPN, Subnetting
Security Basics: Firewall rules, access lists, port security

Certification and Achievements

Completed the **CCNA: Switching, Routing, and Wireless Essentials** certification through the Cisco Networking Academy. ([Link](#))
Completed course and gained certificates from **IBM** and **Cisco Networking Academy**. ([Link](#))
Published research paper on “**Delay Tolerant Routing Protocol using NS-3**” in **IJESE**. ([Link](#))
